

Humble Foods

An Efficiency Maine Case Study

Humble Comfort Food and Spirits in Brewer, Maine, worked with Efficiency Maine to upgrade the restaurant's heating, cooling, and lighting. Humble installed two heat pumps that both heat and cool, and also upgraded their lighting from fluorescent bulbs to LEDs.

"I have definitely seen a **decrease in my electricity bill since the new lights went in,**" said restaurant owner, Meghan Black. "It was a hard year at the restaurant, and **the lights and the heat pump made me excited to get back to work.**"

"**The restaurant is much brighter and warmer** since the new technology went in," said Black. "I remember the first day I walked past the heat pump and it blew warm air in my face. It was **the best feeling in the world.**"

With the recent upgrades, Humble Comfort Food and Spirits **reduced energy costs by about \$1,700 a year.**
