* Listed efficiencies are for systems with wall-mounted, interior units. Systems with ducted or mixed indoor units often have lower efficiencies and may not qualify. Heat pumps that appear with an asterisk next to the outdoor unit model number can be paired with more than one type of wall-mounted, interior unit. Again, some combinations may not qualify. When selecting your heat pump and to ensure rebate eligibility, please pay close attention to both the type and model number of the indoor unit. Work closely with your Registered Vendor and, if necessary, refer to the [Air Conditioning, Refrigeration and Heating Institute \(AHRI\) Directory](#).
