

Variable Frequency Drives Prescriptive Cash Incentives

These incentives are currently suspended.

VFDs reduce energy consumption by controlling motor speeds over time based on changing load demands on HVAC pumps and fans. Standard pump and fan systems always run at full speed, consuming more electricity than required to do the job. A variable frequency drive slows a fan or pump down when the actual load decreases.

Variable Frequency Drives For HVAC Application

D Maximum Incentive
\$1,800
\$2,200
\$2,600
\$3,000
\$3,400
\$3,800
\$4,200

VFD Incentives are available for other applications using the Custom Incentive Application form.

Efficiency Maine is the independent administrator for energy efficiency programs in Maine. Efficiency Maine's mission is to lower the cost and environmental impacts of energy in Maine by promoting cost-effective energy efficiency and alternative energy systems to help customers save electricity, natural gas and heating fuels throughout all levels of the Maine economy.
