

Each year, **thousands of Mainers** buy heat pump water heaters. ENERGY STAR® reports that these high-efficiency units can save a four-person household **more than \$3,000** over ten years when compared to electric water heaters. Other benefits include long warranties and the ability to dehumidify.

Look what these Maine plumbers are saying:

“As long as you have the plumbing and electrical skills to install a traditional electric water heater, you can install a heat pump water heater. You don’t need a refrigeration background.”

— Eric Smith, E.S. Smith Plumbing, Durham

“I’ve been hearing about these for years, but now all of a sudden I’ve got customers requesting heat pump water heaters. I’m installing them all the time.”

— Dan Leonard, Master Plumber, Revision Energy, Portland

“I was a little hesitant to recommend them at first, but when customers started requesting them, I did some research. The short payback and 10-year warranty is what my customers want to see. Now I recommend them all the time.”

— Andrew McPartland, James H. McPartland and Sons, Houlton

“After the Efficiency Maine rebate, heat pump water heaters are pretty close in price to electric water heaters, and with the energy savings and free dehumidification, customers love them.”

— Brian Bickford, Brian Bickford Plumbing & Heating, LLC, Fairfield
