

INSULATION REBATE CHANGES

EFFECTIVE JANUARY 1, 2026

1. Clarifications

- a. The customer copayment requirement was clarified by:
 1. REMOVING "Homeowner EITHER: Paid total project cost (and then received rebate), OR Paid difference between total project cost and rebate amount"
 2. ADDING a new row (row 8) to the rebate calculation table ("Homeowner's required contribution amount, after rebate (row 1 minus row 7)")
- b. The "principal residence" requirement for low- and moderate-income customers was switched:
 1. FROM: Building is owner's principal residence
 2. TO: Condominium or building is owner's principal residence
- c. The language on the rebate claim form now accounts for the possibility that income eligibility verification may occur AFTER rebate claim submission: "Note: If customer is not verified prior to claim submission, the claim may not qualify for a low- or moderate-income rebate, or it may be delayed."

2. Other Changes

- a. In the list of eligible housing units, "manufactured (mobile) home" was switched to "mobile home".
- b. The option to select "Electricity" in the "Pre-upgrade primary fuel" field has been replaced with "Heat Pump(s)" and "Electric Baseboard".
- c. The attic and wall sections of the [Weatherization Requirements Checklist](#) were modified by adding:
 1. an option for open-cell spray foam in attics ("Open-cell spray foam applied to full depth of cavities that were subsequently enclosed.")
 2. options for using different types of rigid insulation in and over walls (by removing the word "foam" from the phrase "rigid foam insulation")
