

“With our heating system upgrade, we now pay half of what we did. Our loan is being paid for by energy savings, too.” Veronica B.

New homes can benefit, too

Even new homes have room for energy improvements. Veronica’s family moved from a 100-year-old home to one that was brand new. Still, their winter heating costs were \$500 a month. After installing a high-efficiency heating system and adding insulation in the basement, Veronica says they’re saving over 50% a month. “Plus water heats quicker and lasts longer, the new furnace is super quiet, and I don’t need to keep checking the oil tank. Peace of mind!”

A \$1,500 incentive and low-interest loan from Efficiency Maine meant Veronica could start saving immediately.

Veronica made a good energy choice. Call or visit us online to learn more about energy efficiency solutions for your home.
